## Introduction

---

I am writing to express my strong interest in the Engineering position within Marcus by Goldman Sachs. With 5 years of full-stack engineering experience specializing in Java Spring Boot, React.js, and cloud technologies, I am excited about the opportunity to develop financial products that directly impact millions of consumers. My proven track record in building scalable microservices, implementing modern architecture patterns, and delivering production systems aligns perfectly with Marcus Engineering's mission to transform consumer finance through technology.

## Why Me?

---

I am an ideal candidate for this role because I bring comprehensive experience across the exact technology stack Marcus requires. At BT Group, I delivered 5 Kafka-based Spring Boot microservices with MongoDB and PostgreSQL, achieving 30% AWS cost reduction through infrastructure optimization. My expertise extends to React.js development, where I led a Next.js migration of over 5,000 lines of code while implementing comprehensive Cypress testing. I have hands-on experience with microservice architectures, distributed systems, and RESTful web services, having built serverless APIs with authentication layers and developed analytics dashboards serving real-time data. Beyond technical skills, I demonstrated leadership by mentoring 5+ apprentices in agile development and managing a team of 10 interns to secure 2nd place in a company-wide competition. My approach of "you build it, you run it, you own it" resonates deeply with Marcus's engineering philosophy, as evidenced by my personal projects like CV Studio, which serves hundreds of active users with full-stack implementation including Stripe payments and real-time database synchronization.

## Why Goldman Sachs?

---

Goldman Sachs represents the pinnacle of innovation where finance meets cutting-edge technology. Marcus Engineering commitment to using machine learning, modern architecture principles, and continuous delivery to democratize financial services aligns with my passion for building impactful consumer-facing applications. The opportunity to work on systems that are primary revenue sources while collaborating with influential professionals across the global organization is incredibly compelling. I am particularly drawn to Marcus's culture of empowering engineers to research, pitch projects, and see great ideas implemented. Having published research on LLM-driven IoT platforms and built ML pipelines for financial analysis, I am eager to contribute innovative solutions that leverage both my machine learning expertise and full-stack development skills. The prospect of creating products grounded in transparency and simplicity to help millions make smarter financial decisions is the kind of meaningful work that drives me as an engineer.

## Conclusion

---

Thank you for considering my application. I am confident that my technical expertise in Java, React.js, Kafka, distributed systems, and cloud technologies, combined with my leadership experience and passion for fintech innovation, make me a strong fit for Marcus Engineering. I look forward to the opportunity to discuss how I can contribute to building the leading digital consumer bank and creating financial products that transform lives. I am available at your convenience for an interview and can be reached at [harith.alsafi@gmail.com](mailto:harith.alsafi@gmail.com) or +447444585915.
