

Harith Al-Safi

Full Stack Engineer

📍 Manchester, UK @ harith.alsafi@gmail.com 🌐 https://harith.io/

🐙 github.com/harith-alsafi 🌐 linkedin.com/in/harith-al-safi

About me

An experienced Electronic & Computer Engineer specializing in full-stack development and AI/ML applications, with a proven track record in developing high-performance systems and leading technical teams.

Experience

Full Stack Engineer

📅 Sep 2024 - Ongoing (12 Months)

BT Group

📍 Manchester, UK

- Delivered 5 Kafka-based Spring Boot microservices through Netflix Conductor, JWT authentication and Pulumi
- Mentored 10+ apprentices on agile development with Java Spring Boot with 90% assessment pass rate
- Achieved 30% AWS cost reduction by automating infrastructure with TypeScript and optimizing ECS cluster usage
- Rearchitected Spring Boot APIs with MongoDB/PostgreSQL with role based access achieving 50% faster response
- Led JavaScript to TypeScript migration of 5K+ lines, adding Cypress testing and OpenAPI to TypeScript code gen
- Managed regional Graduate Network organizing and coordinating monthly tech talks for 30+ attendees

Frontend Developer

📅 Aug 2023 - Nov 2023 (4 Months)

Velz Travel

📍 Remote

- Directed the frontend of a travel web app for a startup built with Redux Toolkit, Next.js and Emotion CSS
- Developed user interface using Material UI following Figma design guidelines and business logic using TypeScript
- Achieved 93% test coverage through comprehensive unit testing, resulting in 70% reduction in production bugs

Software Engineer

📅 July 2022 - July 2023 (12 Months)

Johnson Controls

📍 London, UK

- Invented a custom scripting language with a compiler for C# app increasing development productivity by 40%
- Managed a team of 10 interns to create a business plan and ended up placing 2nd amongst the whole company
- Administered C \C++ projects while fixing bugs, adding features, refactoring and migrating 90% of codebase to C#
- Developed C# .NET libraries for fire detection simulations and data analysis improving operations by 32%
- Collaborated on an analytics web dashboard with React.js for predictive maintenance with dev ops and CI/CD
- Maintained Python automation scripts for automated builds of .NET applications and processing data with Azure

Full Stack Development Freelancer

📅 Dec 2021 - Mar 2022 (4 Months)

Paperound

📍 Leeds, UK

- Developed a scalable analytics dashboard in Next.js, with MSAL and Auth0 for seamless, secure authentication.
- Applied data visualization using Python Matplotlib to present analytical insights to non-technical stakeholders
- Utilized Python, TensorFlow, and Scikit-learn to build, train, and evaluate neural networks
- Built and trained a reinforcement neural network using TensorFlow, KerasRL for predicting stock prices

IT administrator

📅 Jun 2020 - Mar 2021 (10 Months)

Mesopotamia Group

📍 Amman, Jordan

- Collaborated with a team to build a local file server on Ubuntu built using Apache and Nextcloud
- Administered the server using Bash, Python and Nmap with SSH tunneling and port forwarding
- Engineered a load balancer using MPI and C to distribute traffic between servers increasing availability by 34%
- Analyzed the network data logs using Python to predict and prevent cyber attacks
- Implemented Linux networking and protocols using IP addressing and routing for cloud hosting

Education

BEng (Hons) in Electronics and Computer

📅 Sept 2019 - July 2024

University of Leeds (UoL)

✅ First-Class Honors (4.0 / 4.0 GPA)

- Cloud and Parallel computing, Secure and Distributed systems, Cybersecurity, Software Engineering, Data Science
- Embedded systems, Microprocessors, FPGA, Circuit Analysis, Signal processing, Networking, Compiler design

Skills and Languages

Technical:

TypeScript

Java

Python

C#

C \ C++

Bash

Spring Boot

React.js

Next.js

.NET

Redux

Tailwind CSS

Stripe

Auth0

Clerk

MSAL

Kafka

Conductor

Docker

Jira

Git

Matplotlib

TensorFlow

Numpy

SciPy

MongoDB

PostgreSQL

Redis

Firebase

Jenkins

AWS (RDS, Lambda, ECS, EC2, S3)

Pulumi

Soft:

Management

Leadership

Motivated

Deterministic

Communication

Problem solver

Languages:

Arabic (Full Professional)

English (Full Professional)

Spanish (Elementary)

Publications

Vega: LLM-driven Intelligent Chatbot Platform for Internet of Things Control and Development

📅 2025

MPDI Sensors - 10.3390/s25123809 - 1st Author

- Developed a full stack chat bot web application with TypeScript, React.js, Next.js, TailwindCSS and Redis
- Programmed language processing algorithms using large language models to interpret and execute messages
- Implemented a Python Flask REST Server with SQLite on the Raspberry Pi to communicate with the chat bot
- Engineered a circuit with sensors, fans, LCD and buttons to execute the user's commands from the chat bot

Projects

CV Studio

📅 Oct 2024 - Ongoing

👤 Personal - Beta on cvstudio.ai

- Built full-stack resume-improvement web app, powered by large language model, serving hundreds of active users.
- Implemented live resume editing with ShadcnUI and Typst WebAssembly PDF compilation for real-time rendering.
- Integrated Clerk authentication and Stripe subscription payments for secure user access and monetization
- Designed Firestore real-time database with Zustand state management for seamless data syncing

TBot: Machine Learning Stocks Trading Bot

📅 Apr 2021 - Oct 2021

👤 Personal

- Developed gradient boosting machine learning model using Python and Scikit-learn for stock prediction
- Analyzed and processed data using Pandas, Numpy and Scipy for training and testing the model
- Backtested the model using historical data and simulated trading using Python and Matplotlib
- Developed a REST API and a user interface to interact with the bot using AWS lambda, Flask and PyQt

MCPP: High Performance C++ Library for Numerical Computation

📅 Apr 2021 - Oct 2022

👤 Personal

- Created a cross-platform math library for C++ used for matrix algebra, statistics and machine learning.
- Engineered with CI/CD using Jenkins, unit tests, Docker build, Cmake and Doxygen documentation
- Improved performance by 40% using parallel computing with OpenMP, OpenCL and CUDA

Professional Courses

Data Analysis with Python

📅 Oct 2021

- Develop Python code for cleaning and preparing data for analysis
- Perform exploratory data analysis and analytical techniques to datasets using Pandas, Numpy and Scipy
- Manipulate data using dataframes, understand data distribution, perform correlation and create data pipelines
- Build and evaluate regression models using machine learning scikit-learn for prediction and decision making

Databases and SQL for Data Science with Python

📅 Sept 2021

- Analyze data within a relational database on the cloud using IBM DB2, SQL, Python
- Construct SQL CRUD operations and compose views, transactions, stored procedures and joins.

Python for Data Science, AI & Development

📅 Aug 2021

- Demonstrate proficiency in using Python libraries such as Pandas, Numpy, and Beautiful Soup
- Access web data using APIs and web scraping from Python in Jupyter Notebooks.
